DETAILED ACTION

Response to Amendment

The Amendment, filed on 8/18/2004, has been entered and acknowledged by the Examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 6 is rejected under 35 U.S.C. 102(b) as being anticipated by Yokota et al. (US 5,260,627).

Regarding claim 6, Yokota discloses (see figures 1 and 9) a CRT including a panel, electron gun, deflection coils, screen, bulb, and an inner pincushion distortion correction circuit connected in series with the vertical deflection coil. Further (see figures 10 and 11) Yokota discloses a correction coil (74a and 74b) being provided at the same side of the electron gun as the deflection yoke and providing a preliminary deflection force. Further Yokota discloses a pair of diodes (91 and 92) having reverse polarities and connected in parallel with each other and in series to the correction coils (74a and 74b) forming a diode coil series circuit. The diode coil series circuit is then placed in parallel with a resistor (80) to form an inner pincushion distortion correction circuit. The inner pincushion distortion correction circuit is in series with the vertical deflection coils (71 and 72). (Column 13 lines 15-25 and 60-65). The correction coils are

Application/Control Number: 09/576,188

Art Unit: 2879

located at opposite sides of the central axis and facing towards each other. Further the current passing through each coil is equal, therefore the magnetic field formed by the correction coils is substantially uniform across the central axis between the coils and therefore across each of the three electron beams.

Response to Arguments

Applicant's arguments with respect to claim 6 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ogura (US 5,936,363) discloses the use of correction coils on the neck side of the deflection yoke to produce a uniform preliminary magnetic field on the electron beams.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matt P Hodges whose telephone number is (571) 272-2454. The examiner can normally be reached on 7:30 AM to 4:00 PM M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (571) 272-2457. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
